

# Application Hosting - your business applications 'on tap'

The family of hosted solutions  
from Century

## Century's Remote Hosted Solutions 'on tap'

If you want to forget the hassle of maintaining your own company's IT network and reduce the associated running and maintenance costs - Century has the answer.

We now offer a remote hosted approach that means all users, wherever they are, are always on the latest release. No expensive servers, no rolling out of upgrades - all available from home and from anywhere around the globe\*.

### Hassle-free computing

Century's Hosted solutions mean that you can run your own applications, together with major proprietary applications, without the overheads and complications of supporting your own IT infrastructure. We host the programmes and make them available to your users, wherever they are, just as though they were running on your own servers. Goodbye servers, goodbye upgrade costs.

Just think of the benefits. Free-up valuable server room space, no air conditioning required, enormous savings in electricity (reducing your carbon footprint), no IT skills required, goodbye IT administration costs, and no more hassle remembering to take daily backups and to take the tapes home! When using our hosted solution, disaster recovery is built in.

Budgeting is so much easier too. No big bills, just a monthly fee that relates directly to usage.

But the biggest benefit has to be the freedom of allowing users to operate from wherever they happen to be - at home or with a client, anywhere in the world - just as long as they have an internet connection\*.

And, of course, Century's remote hosting runs seamlessly with all our other remote services, including BlackBerry® support, e-Fax support, anti-SPAM and anti-virus. Welcome to the modern world of hosted solutions - from Century.

\*Access anywhere with any Java-enabled browser

### Pay as you go

Leave the infrastructure support to us and enjoy:

- **Elimination of server and upgrade costs**
- **Performance managed by experts**
- **Strong security through encrypted web links and 'key fobs' that generate random pass codes.**
- **Empowered workforce, with secure access from wherever, whenever. True flexitime!**
- **Seamless integration**
- **Improved central control**
- **Consistent rollout of current versions of software**
- **Automatic audit of software usage for license compliance**
- **Immediate space and power savings**
- **Easier budgeting that is always in line with usage**

All supported by Century.

**Century completely manages migration of your existing data and emails to the data centre, speedily and seamlessly - with no downtime.**
